

HOGUE®

Fine Handgun Grips, Rifle & Shotgun Stocks and More

The Hogue Tradition

Quality - Selection - Service

Since 1968 Hogue has produced the finest handgun stocks available, and we are proud of it. We know exactly how to make great firearm products that not only look good but function and fit properly as well. Months and even years go into designing and testing all of our products, assuring that they fit, function and perform properly. All Hogue products come with nearly 40 years of experience and are designed with features that contribute to exceptional accuracy, comfort, and recoil control. Hogue's patented features add up to better accuracy and more comfortable shooting whether in competition, field, or actual combat shooting. Many championship shooters, as well as law enforcement officers, use, and praise Hogue products. Hogue grips have been widely accepted and used for years by law enforcement agencies and as original equipment by most leading handgun manufacturers. From basic concepts to design execution, Hogue's manufacturing processes include the best ideas, finest materials, and finishing all of which we do ourselves, in our family owned facilities. All Hogue products are made under the direct supervision and quality control of the Hogue Family.

We use precision equipment and fit all our grips and stocks to actual firearms, assuring a proper fit. Hogue products come at competitive prices also. Comparisons show Hogue produces the finest products available, and that Hogue products are unsurpassed in value. Research and development here at Hogue is fun because we enjoy shooting, whether for work, fun or in competition. Aaron, Patrick and Neil Hogue are competitive shooters, as well as several others here at Hogue. It is a simple formula for success; we actually use our products! And don't sell anything that we don't or wouldn't use ourselves. All Hogue products deliver reliable performance and years of dependable service.

We guarantee your satisfaction or you get your money back.

Handgun Grips

Monogrip Features

Monogrip one-piece revolver stocks were designed and patented by Guy Hogue a retired L.A.P.D. shooting instructor and armorer.

After years of custom making conventional two piece grips, Guy, a perfectionist, was never satisfied with the way two-piece revolver grips mount and fit, even when custom made.

The answer... a one-piece grip that mounts from the bottom. Trademarked Monogrip, this one-piece design eliminates the short-comings of traditional two-piece grips. This single piece grip slides on revolver frames from the bottom, requiring no modifications to the firearm.

A patented steel "stirrup" device clips over the existing stock pin or bottom strap of the frame. The stirrup is the key component in the system that adapts the grip to the gun handle. Attached in seconds, the stirrup solidly secures the grip to the frame. Because the mounting force is from the bottom, they do not shoot loose. Obsolete two-piece revolver grips attaching from the sides rely on the frame to stock pin tolerance to maintain a secure fit. This tolerance varies, which can lead to loose shifting panels.

Since it is a fact that gun frame dimensions do vary slightly, Monogrips, by virtue of their unique mounting system compensate for varying frame tolerances. This assures a secure, comfortable grip. Monogrips not only dress up a gun, they also are designed to provide optimal pointing characteristics. The famed Hogue orthopedic hand shape, comfortable and secure, is a smooth ergonomic design that positions the hand consistently every time. Shooters are on target faster and more consistently with a grip designed to point naturally. Monogrip allows a high

handhold on the backstrap which lowers the bore line, reducing muzzle rise in recoil and aiding rapid-fire recovery time, especially when using a two-hand hold. Palm swells are ambidextrous, allowing equal comfort and control for either right or left handed shooters. Generous recoil shoulder helps spread impact from heavy magnum loads. And of course all revolver grips are fully relieved for speed loaders.

Hogue pioneered the design concept and refined the functional shape of Monogrip. There is only one original. Although others have tried to copy Hogue's shape in a two piece revolver grip, nothing compares with the features of a true Monogrip. Why buy an inferior two-piece imitation when you can get the real thing?

Smith & Wesson Square Butt with typical stirrup installed.

Semi-Automatic Features

Semi-automatic pistols come in a wide array of frame styles, as do our grips that fit them. We have incorporated the most functional design possible for each particular design of pistol. For example, some auto grips are only available as improved panels, others wraparound with finger grooves. For some pistols we offer both styles. While some guns lend themselves to a grip with finger grooves, some are more functional with simple panels. You can be sure that whatever the basic design all Hogue Grips are designed with improvements in fit, form and function. Grip sizes complement the particular handgun it was made for, as small as possible on large double stack magazine guns, and maybe a little fuller on small frames. We produce models to fit almost all popular Semi-automatic pistols, among which are our patented, easy to install, two piece grips for the 3rd Generation Smith & Wesson autos. Others have tried to make grips for these guns only to come up with complicated substandard results. Our patented system is another excellent example of Hogue ingenuity.

Soft Rubber

Para-Ordnance. Super thin grips with finger grooves for high capacity automatics.

CZ, TZ-75, Ruger P-Series, Browning HI Power, S&W 6906

Hogue rubber grips are molded from a durable synthetic rubber that is not spongy or tacky, but gives that soft recoil absorbing feel, without effecting accuracy. This modern rubber requires a completely different molding process than ordinary neoprene and results in a much superior grip. The material we use does not come apart, deteriorate or harden, and is resistant to all solvents and oils used around firearms. Hogue Rubber Grips give you a lasting precision fit and durability that will provide years of dependable service. The flexibility of our materials and molding process has allowed us to produce superior rubber grips with features that out perform all other makes.

To retain their shape, Hogue soft rubber grips utilize a modern, light-weight synthetic insert (skeleton) that chemically bonds to the rubber. This prevents them from delaminating or coming apart as can happen with old fashion brands with metal inserts. Being a true one-piece grip with a single one-piece insert, Monogrips have no mismatched seam to come apart. And of course, our rubber revolver grips have all the features that made the Hogue Monogrip famous...orthopedic hand shape, proportioned finger grooves, (real finger grooves, not just small nonfunctional bumps) and they are fully relieved for speed loaders. All Hogue rubber grips hold securely in cold, wet or sweating hands, and do not have any metal medallions that can irritate the hand.

S&W KRD Conversion

Soft Rubber & Nylon

Hogue grips are also attractive as well as functional. Molded in a handsome black color they dress up either blue or stainless handguns. Hogue's exclusive "Cobblestone" has become the texture of choice among firearm enthusiasts. Cobblestone provides a positive nonirritating stippling feature that replaces traditional checkering. This texture not only gives Hogue a modern and distinctive look, but is also very functional. It is specifically designed to be a balance between a sharply checkered and a smooth grip. Cobblestone provides a firm grip but when grip pressure is relaxed this texture allows the mobility of a smooth grip.

Our exclusive molding process is exceptionally superior when it comes to semi-automatic pistols. Because the rubber we use actually bonds chemically to the insert, a smooth hard surface can remain on the inside of the grip. This duplicates a stock grip configuration on the inside, and allows us to maintain exacting tolerances. This very important feature sets Hogue apart. Other brands with metal inserts must wrap rubber all the way around the insert which can hang up on the vital working mechanisms found so close to the grip on many automatics. And the superior design of Hogue grips allows us to provide rubber over the entire outside of the grip. Beware of other flimsy brands that do not have an insert at all or others that only provide a patch of rubber on an otherwise hard grip. Hogue rubber grips utilize a strong insert but because rubber doesn't have to wrap all the way around we can make a smaller and more comfortable grip for high capacity double stack magazine guns.

SIG P226, S&W 3rd Gen, SIG P226, SIG P220 w/finger grooves

Beretta

Your favorite Ruger Single Action revolver will also benefit from a Hogue Rubber Grip. Hogue Grips ergonomic shape provides a secure handhold, positioning the knuckle away from the trigger guard, eliminating knuckle busting rolling of the hand during the recoil. Cowboy style grips are good for light recoil action shooting and show but a Hogue rubber grip is ideal for hunting with today's Magnum loads.

Nylon

Selected Monogrip models are available made from Nylon. True to our high quality standards, Hogue is the only maker to offer handgun stocks made from this solid material. In addition to the advantages of the Monogrip, unique features of a nylon grip are high strength and durability, and the property of being able to be worked like wood allowing a user to customize their own grip.

HANDALL® Universal Grip Sleeves

Glock

Hogue HANDALL grip sleeves are scientifically designed and patented with a special shape that hugs the contours of your gun. This exclusive shape gives a secure fit with no loose spots, giving HANDALL the tightest and most secure fit possible. Our special shape is far superior to any simple "tube" sleeve and is the finest and most popular grip sleeve made.

Hogue HANDALL features include: proportioned finger grooves, our unique cobblestone texture, and ambidextrous PALM SWELLS for the ultimate in a comfortable, non-slip surface. Molded from our modern, soft, but durable rubber, HANDALL grip sleeves are easy to install with no lubrication required. These comfortable grips are tough and resistant to all oils and solvents found around firearms, giving years of dependable service.

The original full size HANDALL fits most medium to full size semi-auto pistols. In fact the unique HANDALL shape allows it to fit over 50 different semi-auto handguns! The HANDALL Jr. with its single finger groove is designed smaller and contoured to fit most small "pocket pistols" as well as some pistol grip rifles. Hogue HANDALL grip sleeves are a simple and inexpensive way to tremendously improve shooting comfort, accuracy and control. Hogue also manufactures a multi colored line of grip sleeves for tools. A separate brochure of HANDALL tool grips is available on request. Or you can review all Hogue products online at www.hogueinc.com.

Smith & Wesson K or L Round Butt

S&W Sigma, S&W 3rd Gen., HK-USP

Hogue Bantam™ Grips

Ultra Light and Compact

Bantam grips are the lightest and most compact rubber grips available. In fact a J frame Bantam grip weights only 1.4 ounces making it at least .8 ounces less than the nearest competitive grip. Using a revolutionary Patented Hogue design, these ultra light grips simply snap onto the gun, requiring no screws, or metal parts. Bantam grips do not extend below the grip frame for maximum concealability. The design, finger grooves and Cobblestone finish improve control and evenly distribute recoil. Bantam Grips are currently designed for Smith & Wesson K&L, J Round Butt and Ruger Redhawk revolvers.

Fancy Hardwoods

Colt .45/1911 Copies in Coco Bolo

Typical Revolver in Pau Ferro

Beretta in Goncalo Alves

Hogue fancy hardwood grips are in a class of their own, and are acclaimed by many as the finest handgun stocks available.

We guarantee that the finest workmanship and materials go into every pair. Not only are Hogue grips attractive but they are extremely functional. At Hogue all work is done "in house" by expert craftsmen. All Hogue hardwood grips are precision inlet on modern computerized machinery (CNC), then hand finished on actual factory frames, assuring a proper fit. Finally, they are hand polished to a non-slippery sheen using natural Carnauba wax which will not crack and peel like cheap, sprayed-on finishes.

Hogue wood grips are made from many fancy and exotic hardwoods, chosen for their beauty and durability. All of these woods are much harder and denser than ordinary walnut, and offer a wide variety of contrast and grain figurations. All the woods we use are the highest quality, kiln-dried hardwood available. Our two most popular hardwoods are GONCALO ALVES (GON-SA-LO AL-VES) and PAU FERRO (PAW FAIR-RO). Goncalo Alves is very popular and is certainly one of our favorites. PAU FERRO is also a favorite, with rich beautiful figure that resembles fancy dark walnut. Goncalo Alves and Pau Ferro are among the hardest and most durable woods in the world. The other exotic hardwoods that we offer are what we consider to be special order woods, as they can sometimes be in short supply.

Fancy Hardwoods

Colt .45/Most 1911 Copies in Kingwood

Our Exotic woods include Kingwood, Tulipwood, Coco Bolo and Rosewood. These exotic woods give you a virtual rainbow of colors to choose from. All of our natural woods pictured in this catalog are shown in their natural colors, no stains or artificial colors are used. Our wood grips are also available in very attractive, lightweight laminated hardwoods in either Rosewood or what we call LAMO CAMO colors. The samples pictured in this catalog are very good representations of the general character and color of the wood, however, each and every grip is unique and will vary in color and figure.

- Pau Ferro no finger grooves & smooth finish
- Tulipwood with finger grooves & smooth finish
- Tulipwood with finger grooves, accent stripe, butt cap & checkering.

All our grips are hand polished with natural Carnauba wax for the very finest finish.

Revolver Grips

Hardwood revolver grips come standard with proportioned finger grooves and Hogue's famous orthopedic hand shape. And of course, all are fully relieved for speed loaders.

Custom options include precision-cut checkering, contrasting butt cap with accent stripe and your choice of one or no finger grooves.

Smith & Wesson now supplies all revolvers with a round butt. Traditionally round butt guns were more concealable and demanded a smaller grip. Now -a-days it's common to put a full size grip on a full size round butt revolver. Round Butt frames, being small, allow larger "square butt" style grips to be used. The one piece Monogrip design makes an ideal grip for converting the round butt frame configuration to a square butt grip. The Hogue "Conversion Grip" allows a superior transition between the grip and the frame. This perfect transition is simply not possible with a two piece grip. (refer to the illustration on page 1)

S&W NRD Butt in checkered Rosewood Laminate

Scrimshaw

Select Ivory Polymer grips are available with engraved scrimshaw artwork. Several attractive designs as well as military insignia are available for Colt Government style pistols as well as for Ruger and Colt Single action revolvers. Be sure to check out our getgrip.com web site to see all the currently available designs and art.

S&W "J" Frame in Pau Ferro, Ruger SP101 in Goncalo Alves

Cowboy Action Shooting

Cowboy Action Shooting is one of the largest and most fun shooting sports! Tradition, authenticity and quality are of prime importance. We produce these quality grips in most of our exotic woods, plus white and black Micarta, white and black Pearlized polymer, Ebony, Fancy Walnut, plain or Scrimshaw Ivory Polymer.

Automatic Grips

When it comes to Semi-Automatic pistol grips, Hogue Grips are in a class by themselves! Many automatics have

mechanisms that come very close to the grip, requiring proper clearances. Others depend on the grip to hold vital pins and/or springs in place. Hogue's precision CNC woodworking equipment allows us to maintain these exacting tolerances that are especially important on automatics.

Walther PPK/S in Tulipwood, S&W 3rd Gen. in Coco Bolo Compact .45 in Tulipwood, SIG P230 in Kingwood

Aluminum

Hogue Extreme™ series grips are machined from Aerospace grade 6061 T6 Aluminum, Titanium or old world Damascus steel. The Extreme series grips are the absolute ultimate for the shooter that has everything! Extreme grips are available for most semi-auto pistols that Hogue currently makes and are carefully engineered and sized for the ultimate in fit, form and function. The strength of these materials allow for the thinnest possible grips on large double stack autos such as SIG pistols.

Extreme grips are precision machined from solid billet stock to exacting specifications and are designed for a lifetime of use. Aluminum grips are hard Type III anodized and available in 5 colors; Clear, Black, Red, Blue, and Green. Titanium and Damascus steel are polished to a high luster that accentuates the natural characteristics of the material.

Precision sharp, crisp checkering is available on aluminum models and Extreme Hybrid™ models are available with a textured Exotic Hardwood insert.

Ruger MKII/MKIII in red anodizing, SIG Sauer in clear, Beretta in blue, Colt .45/1911 in Hybrid and OD panels.

SIG Sauer 228-229 in Coco Bolo, Ruger P Series in Kingwood

Covering a major portion of the handgun, the grip affects its appearance tremendously. Hogue automatic pistol stocks are used by many top pistolsmiths for their exacting fit and attractiveness.

A fancy grip will turn an ordinary gun into a unique custom firearm!

OverMolded™ Rifle and Shotgun Stocks

Hogues' OverMolded stocks are truly revolutionary, no other maker can offer stocks with these superior patented features. Constructed by molding a super strong, rigid fiberglass reinforced skeleton or "insert" that precisely fits the guns' action. This rigid skeleton is then OverMolded with a durable but soft synthetic elastomer (rubber). During the heat and extreme pressure of injection molding the elastomer adheres chemically as well as mechanically to the skeleton, resulting in a permanent bond between the rubber and the insert. The super strong skeleton gives the stocks their strength, and the precise molded dimensions provide a perfect drop-in fit of your rifle or shotgun action.

OverMolding with rubber provides a superior stock in every way. OverMolding provides the ultimate in a comfortable, non-slip, super smooth attractive finish that is durable and extremely quiet.

Remington 700 in OD green, Mauser 98 in black

Top to bottom: Advantage Max4, Advantage Timber, Realtree Hardwoods

Ruger 10-22 in OD green, Ruger Mini 14/30 in black, AR-15/M16 in OD green.

The exclusive Cobblestone texture further enhances all Hogue stocks by providing an efficient non-slip, non irritating stippling pattern. The state of the art elastomer material used on Hogue stocks won't harden with age and is virtually impervious to all oils and solvents found around firearms, providing years of dependable service.

Hogue OverMolded stock features are so desirable they are being offered as standard equipment on precision sniper rifles and several famous rifle companies have entered into a licensing agreements with Hogue to use this OverMolded technology on their quality products.

Stock Features

All the following custom features come at prices comparable or below any other standard synthetic stock on the market!

Hogue stocks incorporate every desirable feature a fine rifle stock should have. By adding our unique OverMolded technology we have created a much superior and unique stock compared with anything on the market today. Features include a sleek straight comb, palm swells and a "varminter" style forend, all treated with our unique "Cobblestone" texture. Hogue centerfire rifle stocks are designed to free-float the barrel for maximum accuracy and models are available with the proper clearance for standard as well as heavy "varmint" barrels. Hunters especially will be impressed by the stocks incredible quietness, exceptional accuracy and lightweight non-slip comfort. Our stocks also come equipped with standard sling swivel studs and the finest in recoil pads. Hogue recoil pads are formulated and molded from a "super cushion" blend of recoil-reducing materials that rivals and even surpasses any other pad available. Our special material coupled with computer designed, internal cushion structure provides outstanding recoil control and shooting comfort. The recoil pad has a standard screw spacing and is removable, allowing our standard 13 3/4" length of pull to be adjustable or another pad combination to be installed.

Bolt Action Rifles: Aluminum Pillar Bedding or Full length Bedding Block

Pillar Bedding

All centerfire bolt action stocks come standard with aluminum pillar bedding, normally a gunsmith installed custom option costing over \$100.00. Our molding process and our desire to produce the best product available compelled us to include this feature as standard. Pillar bedding utilizes aluminum bosses embedded in the stock insert at the critical action mounting bolt locations. These aluminum pillar beds guarantee an accurate, rock-solid action fit that will not shoot loose. Aluminum conforms to the rifle action making aluminum superior even to a steel pillar bed. Hogue stocks are not only the finest synthetic stock possible, but are also unsurpassed in value! Aluminum Pillar bedding is not found standard on any other injection molded synthetic stock.

Full Length Bedding Block

For the absolute ultimate in accuracy, all Hogue bolt action stocks are optionally available with a precision-machined, full length bedding block molded into the stock. This solid aluminum, CNC machined, 7075 T6 aircraft aluminum block completely surrounds the action and extends full length into the forend. The full-length block absolutely guarantees the ultimate in accuracy by providing rock-solid stability over the full length of the stock. In fact, the Hogue full bed block stock has been independently tested and it was the only stock that retained zero after a 30 foot drop! The full-length bed block coupled with all of our other features make Hogue stocks superior and a much better value than stocks costing hundreds more, in fact Hogue full length bed block stocks are the

Left: Stock with Aluminum Pillar Bedding

Center: Stock with full length aluminum bedding block "the best there is"

Right: CNC machined 7075 T6 aircraft aluminum bedding block that is molded into the stock.

finest stocks available at any price. Hogue is the only injection molded stock of any kind, offered with an Aluminum Bedding Block.

The unique features and advantages of Hogue stocks give real solid compelling reasons to replace your current stock, synthetic or wood!

Ruger Mini 14/30

Ruger Mini 14/30 with Hogue Overmolded Rifle Sling

When fitted with a Hogue OverMolded stock, your Mini 14/30 will exhibit superior handling characteristics over that of the original stock. Hogue developed the perfect stock by considering what the knowledgeable shooter needs from their Ruger Carbine. The length-of-pull has been extended to 13 5/8" for improved feel and sight picture and the fuller fore-end shape was designed for a more secure and comfortable hold. A gentle 1/2" drop at heel facilitates fast easy mounting and sight acquisition. Keeping with the spirit that makes this rifle a great field carbine the stock is carefully styled with smooth pleasing lines and Hogue's Cobblestone texture effectively aids grip in a vast range of environmental conditions. Lastly, the butt is fitted with a moderately soft recoil pad perfectly suited for the recoil of .223 or 7.62 x 39 cal. ammunition. Of course, the standard Ruger barreled action will easily drop-in for a secure, tight fit.

Ruger 10/22

Ruger 10-22 with Hogue Overmolded Rifle Sling

The Ruger 10-22 is one of the most fun rifles to own. Customizing them is almost as much fun as they are to shoot! Our OverMolded 10-22 stock is the finest and most functional stock made for this rifle. Features include sleek styling, comfortable palm swells and a "varminter" style forend for a more comfortable and secure hold. Hogue 10-22 stocks come equipped with sling swivel studs and feature simple drop-in installation with models available to fit either standard or heavy target barrels. A Hogue stock combined with a precision, target barrel, turns your 10-22 into a super trick, tack driving, custom rifle.

AR-15/M-16 Rifles

AR-15 style rifles, regular or carbine length, in black or OD green.

Hogue has applied OverMolded technology to AR-15 style rifles producing the ultimate grip and forend combination. The O.M. AR-15 grip is specifically designed to retain the important lines and aesthetics of the AR, while at the same time providing a comfortable rubber grip with finger grooves and palm swells. The forend is a unique two-piece, free-floating rubber OverMolded aluminum forend tube. Free-floating your AR barrel gives maximum accuracy by eliminating all hand guard forces on the barrel. The rubber OverMolding gives a super comfortable, non-slip grasping area that insulates your hand from the heat produced during rapid fire, or the cold of extreme climates. The two-piece design installs easily on most AR/M-16 style rifles.

Slings and Sling Swivels

Hogue Slings are made from strong Nylon OverMolded with a synthetic rubber shoulder pad which provides a comfortable secure carry of your favorite rifle or shotgun. The unique molding method gives the sling a slight stretch that helps eliminate rifle or shotgun bounce as you walk. The pad and nylon sling are completely waterproof and the premium UV resistant materials remain flexible through years of dependable service. Easy slide polymer buckles won't mar stocks and provide simple quick length adjustment. Hogue slings are a perfect match for our Poly Swivels but are easy to install on any standard sling swivel.

Sling Swivels

Hogue Poly Swivels™ sling swivels are manufactured from a high strength polymer for maximum durability. In fact they have a breaking strength far in excess of the force normally required to pull apart conventional steel swivels. Poly Swivels will not rust, are super quiet and will not mar a wood stock. Poly Swivels are the perfect addition to your existing stock or your new Hogue OverMolded stock. The quick release stud easily attaches to standard swivel studs.

OverMolded Shotgun Stocks

Advantage-Max4 Advantage-Timber Realtree-Hardwoods Advantage-Wetlands

Full size Winchester 1300, Remington 870 and Short Shot length Mossberg 500.

Hogue Shotgun Stocks are molded from a super tough fiberglass reinforced polymer assuring stability and accuracy. The grip area of the stock and the entire forend are OverMolded with soft rubber for outstanding shotgun handling characteristics which facilitates fast easy mounting and sight acquisition. The grip also features ambidextrous ergonomic palm swells and the stock is finished with an exclusive recoil cushioning Hogue butt pad. These superior stocks are durable, weatherproof, and non-slip. Hogue Shotgun stocks are super comfortable with a standard length of pull and our "Short Shot" models have a shorter 12" length of pull that is perfect for youngsters or for use with body armor.

For Law Enforcement use Hogue Shotgun Stocks are also available in a "less lethal orange" color for easy identification.

Tamer Pistol Grip Stock

The exclusive Hogue Tamer™ pistol grip is also available for your Shotgun. The Tamer features Hogues' famous orthopedic hand shape with compound palm swells and proportioned finger grooves and utilizes an internal Tamer™ recoil cushion that dampens the painful recoil of magnum loads.

Hogue Shotgun Stocks and the Tamer grip are designed for use with standard rifle slings.

All the features of Hogue Shotgun Stocks come at a very competitive price adding up to the best value in shotgun stocks - Bar None!

Hogue Recoil Pads

Hogue EZ grind and pre sized recoil pads are made with an exclusive recoil reducing cushioned elastomer bonded to a super rigid polymer alloy base plate. Hogue pads feature computer designed internal cushion construction combined with a super soft elastomer for the ultimate in recoil cushioning and control! The exclusive polymer alloy base plate is super strong and eliminates cracking and checking problems associated with other brands. The sleek shape of our pads is designed for use in the field where a combination of control and fast mounting is essential.

Hogue Pre-Sized pads are molded and pre-ground to fit most common rifles and shotguns within .050" for easy "do it yourself" installation, eliminating the need for custom grinding to fit.

EZ grind pads are available in three sizes and are designed to be ground to fit using standard disk or belt sanders. Both the cushioned rubber and base plate grind very cleanly and easily blending with your wood or synthetic stock and there are no steel inserts to run into.

Hogue recoil pads deliver the ultimate in recoil control. They improve your shooting comfort and accuracy while enhancing the look and feel of your favorite rifle or shotgun. All at a very reasonable price!

PowerSpeed™ Hogue's Universal Speed Holster

Colt 45 with checkered, pewter colored rubber grips in the PowerSpeed Holster.

The Most Versatile and Unique Holster Ever Made

The PowerSpeed holster is designed for competition, duty and concealed carry use. The patented PowerSpeed holster is modular, and truly universal. Use only the parts needed for your gun, and within seconds the PowerSpeed is easily assembled for left or right hand use then adjusted to fit virtually any semi-auto handgun! Incorporating a unique locking mechanism, the Hogue PowerSpeed is one of the fastest and most secure holsters ever made. The locking mechanism is super simple, completely unique, and has 3 quick settings: Fully locked, Semi Race, and Full Race. Fully locked mode is so secure you can actually lift the shooter off their feet by the grip of the gun but is instantly released on a draw! In Full race mode the gun is held in place solely by powerful rare earth NeFb magnets. The magnets are so strong they can hold a pistol upside down and are secure enough to pass a jump test, but look out, blazing fast draws are a snap in this mode. The Hogue holster, even fully locked, can easily beat any other holster on the draw.

To complete the versatility of the PowerSpeed holster, it comes with two belt mounts: a dropped competition/duty style, and a high rise style. The competition/duty style is fully adjustable for angle and cant and includes an exclusive belt locking and adjustment system that accommodates belt sizes from 1 1/2" to 2 1/4". The 2nd belt plate is a high rise style that fits a 1 1/2" belt & is designed for duty, concealed carry and practical shooting use.

Features of the PowerSpeed include modular, truly universal design that is fully ambidextrous and adjustable, exclusive pistol securing mechanism, and super strong reinforced polymer construction.

Fully Locked and Full Race positions.

Grip Screws - The Perfect Finish

Dress up your semi-auto and new Hogue grips even further with a set of Hogue grip screws. Available for most popular semi-automatic pistols, Hogue offers these fine screws for most model handguns in either slotted or Allen (hex) head styles. Replace those marred up screws with the standard slotted for the new "factory" look or use the Allen head screws for the "custom" look. Allen head screws also prevent the driver from slipping out of the screw, minimizing the chances of scratching your new grips!

Note: Although most automatic grips are designed to utilize your existing screws, Hogue revolver grips all come with mounting hardware including screws.
